

1-Digital Egypt Builders Initiative (DEBI)

The Digital Egypt Builders Initiative (DEBI) is a government program launched by the Ministry of Communications and Information Technology in Egypt. Its main goal is to prepare and qualify students and graduates for careers in modern technology fields.

Fields of study include:

- Artificial Intelligence (AI)
- Software Engineering
- Data Science
- Cybersecurity

Duration:

- The program lasts for one full year.

Key benefits:

- Completely free of charge
- Internationally recognized certification
- Practical training combined with soft skills development
- Strong employment opportunities after completion

2- Full Stack AI Software Engineer

This is a real job posting at Orange Business for a Full Stack AI Software Engineer role.

 Job link: <https://www.linkedin.com/jobs/view/4400720787>

Job Explanation

A Full Stack AI Software Engineer is responsible for designing and building complete software systems that combine web development and artificial intelligence. The role involves working on both the frontend (user interface) and backend (server-side logic), while also integrating AI technologies such as Large Language Models (LLMs), Generative AI, and data pipelines.

In this job, engineers build intelligent applications that help business teams automate tasks, analyze data, and improve decision-making.

Key Responsibilities

- Develop full-stack applications using React for frontend and Python (FastAPI) for backend
 - Build and integrate AI features such as LLMs, RAG systems, and prompt-based solutions
 - Work with data pipelines and AI models to turn them into usable products
 - Use Docker and Kubernetes for deployment and system management
 - Collaborate with AI engineers, data scientists, and business teams
 - Ensure application performance, scalability, and reliability
-

How It Can Be Done as Freelancing

As a freelancer, this role can be broken into smaller AI and web development projects, such as:

- Building AI chatbots for customer support systems
- Creating web applications with AI features like smart search or recommendations
- Developing automation tools for businesses
- Integrating AI models into existing websites or applications

Freelancers usually find such projects on platforms like Upwork or Fiverr, or by working directly with startups that need AI-powered solutions. These projects are typically high-paying but require strong experience in both web development and artificial intelligence.

3- Backend Engineer Intern

This is a real internship opportunity at WhispYr AI for a Backend Engineer Intern role.

🔗 Internship link: https://wuzzuf.net/internship/ochurhchjtrv-backend-engineer-intern-whispyr-ai-cairo-egypt?utm_campaign=google_jobs_apply&utm_source=google_jobs_apply&utm_medium=organic

Internship Overview

This internship focuses on backend development for modern web and SaaS applications. The intern will work on building server-side systems, APIs, and database management for production-ready applications in a fast-growing startup environment.

The role provides hands-on experience in real-world software development, especially in scalable backend systems.

Technologies and Skills Used

- TypeScript
 - Node.js
 - Next.js
 - Prisma
 - PostgreSQL
 - Redis
 - API Development
 - SaaS Applications
 - Code Review
 - Problem Solving
 - Backend System Design
-

Responsibilities

- Develop backend services using TypeScript and Node.js
- Build and maintain API routes for web applications

- Work with databases such as PostgreSQL and Redis
- Collaborate with senior developers through code reviews
- Contribute to production-level SaaS applications
- Support system performance and scalability

How It Can Be Done as Freelancing

As a freelancer, a backend engineer with similar skills can work on:

- Building REST APIs for websites and mobile apps
- Developing backend systems for e-commerce platforms
- Creating database-driven applications for startups
- Integrating authentication systems and payment systems
- Maintaining and improving existing backend systems

These projects are commonly available on freelance platforms like Upwork and Fiverr, or directly through startups that need backend support.
